

This manual provides instructions for safe installation of the *InterLock* Kit onto a Bryant panel. The back plate sits securely on the face of the panel cover while allowing the front plate to slide between the main and generator breaker positions. The *InterLock* Kit will only allow one of these breakers to be in the “ON” position meeting the requirements of Article 702 of the National Electric Code ANSI/NFPA 70. The installation of the breaker retaining strap meets Article 408.36 (NEC 2008).

## **SAFETY PRECAUTIONS – IMPORTANT SAFETY INSTRUCTIONS**

### **WARNING: HAZARD OF ELECTRIC SHOCK OR EXPLOSION**

- This kit must be installed and serviced only by qualified electrical personnel
- Turn off all power supplying the equipment where this kit will be installed before working on or inside the equipment
- Always use a properly rated voltage sensing device to confirm that all power is off
- Replace all devices, doors, and covers after installing this kit before turning on power to the equipment
- Always wear safety eyewear while drilling or working around electrical equipment

### **FAILURE TO FOLLOW THESE INSTRUCTIONS CAN RESULT IN SERIOUS INJURY OR DEATH**

### **SAVE THESE INSTRUCTIONS**

## **INSTALLATION INSTRUCTIONS**

- 1) Disconnect power to the panel
- 2) Separate plates. Remove backing from double stick tape. Align back plate (P-3111) around the opening for the main and generator breakers. See **Figure II** (Do not drill holes at this time)
- 3) Remove panel cover
- 4) Relocate breakers from slots 6 and 8 (top 2 spaces of the right breaker column below main) utilizing piggyback breakers as necessary to create the needed spaces
- 5) Install generator breaker in the 6,8 slot.
- 6) Temporarily remove breakers from the 9, 10 slots. Loop the breaker retaining strap (S-1004) around breakers 5, 6, 7, 8 - ½” from the front face of the breakers. Align the head of the retaining strap at the top right of the number 2 breaker and tighten the strap. See **Figure IB**. Cut the tail of the retaining strap approximately 2 inches long and install Notice Label (S-1005) around tail. Reinstall the breakers in the 9, 10 slots. Verify that the retaining strap keeps the 6, 8 breaker in place by attempting to remove the breaker.

- 7) On suitable surface use included 11/64 drill bit (H-3115) to drill out holes in the panel cover through the predrilled holes in the back plate (P-3111)
- 8) Use file to smooth surface around holes and remove the burrs on back of panel cover. **On the back of the panel cover file away paint to allow entire screw head to sit with metal to metal contact.** The binder screws (H-3114) must sit flush with the back of the panel cover
- 9) Insert binder screws (H-3114) through the back of the panel cover, back plate (P-3111), and front plate (P-3112). Use the binder post (H-3113) to attach to front of binder screws (H-3114). Handhold binder post (H-3113) while using screwdriver to tighten the binder screws (H-3114). The front plate should slide easily and the back plate should sit firmly. Be careful not to over-tighten.
- 10) Set generator and main breakers in the “OFF” position and reattach panel cover

**Figure I**

**Figure IB**

- 11) With the panel cover firmly in place test the *InterLock* to make sure that it transfers easily between positions. **BOTH BREAKERS SHOULD NOT BE ABLE TO BE IN THE “ON” POSITION AT THE SAME TIME.** Even with moderate pressure you should not be able to engage both breakers at once.
- 12) Apply thread lock (H-3116) to all four binder post (H-3113) as per instructions included with the thread lock
- 13) Attach labels in designated areas of concern.
- 14) Reconnect power to the panel
